a missed opportunity

Tools & thinking

01 A beginning

TOOL

Magnific (character) + Claude → code

The character was generated with AI; the world around her is code. The knot is built from hundreds of random loops so “hard” looks genuinely overwhelming. One orange thread escapes the chaos and ends right at her fingertips: the beginning is always within reach.

02 The dark funnel

TOOL

Claude (Anthropic) → HTML Canvas

A statistic is easy to read and easy to forget, so the 61% becomes physical: buyers flow through a funnel and most of their journey happens in the dark. In the live version your cursor is a flashlight, so you literally have to go looking for them.

03 The script

TOOL

Claude (Anthropic) → HTML + SVG

The story is about a gap too small to notice. Each panel shows the team drifting away from the platform while one line underneath shows why: a few degrees off on day one becomes a missed opportunity by month six. The panels darken as the story does.

WHY AI

I generated the character in Magnific, using the INFUSE character sheet as the reference, because a human figure is where AI illustration shines and a flat, limited-palette prompt keeps it on brand. Everything around her — knot, thread, funnel, storyboard — is built in code with Claude, so it stays crisp, animates, and follows the palette exactly.
